ENERGY POLICY
OF NLMK GROUP
Energy efficient production — competitive advantage

VISION
NLMK Group is one of the most profitable global producers of steel and metal products. The high-quality products manufactured by companies of the Group are in demand by the strategic industries – construction, mechanical engineering, energy engineering, ship-building, chemical industry, oil-and-gas, and many other industries.

OBJECTIVES
achievement of minimum, technical and economically sound level of specific energy intensity and product cost

MISSION
Manufacturing products that satisfy customer demands; steadily improving production processes, ensuring safe working conditions, mitigating environmental impact, prudently using resources, and maintaining generally accepted social responsibility practices.

leadership in application of advanced energy efficient technologies

PRINCIPLES
- rational use of fuel and power resources;
- maximum use of secondary energy resources;
- commitment to achievement of BAT level in terms of production energy efficiency;
- conformance to the legal requirements as well as national and international standards in the field of energy saving and energy efficiency improvement;
- disclosure and availability of information on energy efficiency of NLMK Group’s companies.

OBJECTIVES
ensure reliable power supply of the production;
- reduce specific product energy intensity and consumption of fuel and power resources without loss of production;
- upgrade production by introduction of energy efficient technologies, equipment, materials and engineering;
- provide for maximum recycling of secondary fuel and energy resources generated during the production process;
- ensure continuous monitoring of consumption and generation of fuel and energy resources in core and auxiliary production processes;
- continuously improve energy management systems based on the analysis of data and information;
- improve competence of employees in terms of energy saving and production energy efficiency.

MANAGEMENT COMMITMENTS
- define principles and objectives of NLMK Group’s Energy Policy and ensure their implementation;
- ensure conditions for energy intensity reduction and production energy efficiency improvement;
- provide with required resources and information for achievement of set objectives of NLMK Group’s Energy Policy;
- introduce efficient mechanisms motivating personnel for the reasonable use of fuel and energy resources.

PERSONNEL COMMITMENTS
- know and understand NLMK Group Energy Policy.

Vice President, Energy

S.V. Chebotarev

NLMK Group
